

LifeSense® Hydraulic Hose Condition Monitoring System

Each hose contains a sensor that continuously monitors conditions

- Detects and warns of imminent hose failures
- Real time monitoring improves maintenance efficiency
- Can provide over 50% longer hose life by eliminating premature replacement

Perfect for

- Agricultural equipment
- Manufacturing
- Oil and gas production
- Landscaping systems
- And more!

Increased efficiency and peace of mind

PROBLEM: The Greenbrier resort in White Sulphur Springs, West Virginia needed to identify failing hydraulic hoses on putting green rollers

SOLUTION: RL Miller installed LifeSense® to identify faulty hydraulic hoses, so they could be repaired before they could cause costly damage to the golf course

“This is one of those solutions that you hope you never have to use, much like an insurance policy. LifeSense provides a total sense of security ... ”

- Kelly Shumate
Director of Golf Course Maintenance at The Greenbrier
